

RMBS Market Intelligence Dashboard

Trading Analyst, Asset-Backed Finance | Apollo Global Management | April 13, 2026

Job Posting

Role: Trading Analyst, Asset-Backed Finance

Company: Apollo Global Management | Location: El Segundo, CA

Source: Indeed.com (saved as docs/job-posting.pdf)

Reflection

This Trading Analyst role at Apollo Asset-Backed Finance requires the quantitative and analytical skills built throughout this course. The posting explicitly lists SQL as a desirable skill alongside demonstrated analytical, problem-solving, and financial modeling abilities -- all of which map directly to coursework in dimensional modeling, dbt transformations, and Snowflake-based analytics pipelines. This project builds an end-to-end RMBS Market Intelligence Dashboard: a pipeline that extracts Federal Reserve economic data (mortgage rates, delinquency rates by loan type, housing starts, and home price indices) via the FRED API, transforms it through raw, staging, and mart layers using dbt in Snowflake, and surfaces market insights through a deployed Streamlit dashboard. A knowledge base synthesizes research from Apollo's investor communications, SIFMA market reports, and housing finance research to support the investment screening and ad-hoc reporting described in the posting. The skills demonstrated -- SQL, pipeline engineering, dimensional modeling, dashboarding, and domain research -- transfer directly to the Trading Analyst role and to similar quantitative analyst positions across fixed income, structured credit, and asset management.

Project Summary

Pipeline:

FRED API (Python) -> Snowflake raw -> dbt staging -> dbt mart (star schema) -> Streamlit dashboard

Knowledge:

Firecrawl scrape (Apollo, SIFMA, Urban Institute, MBA, Fed) -> knowledge/raw/ -> Claude Code -> knowledge/wiki/

Schema:

fact_market_metrics + dim_time + dim_metric_type + dim_geography

Dashboard:

Descriptive: current RMBS market snapshot | Diagnostic: delinquency rate drivers

Transferability

This project transfers to: Fixed Income Analyst, Credit Analyst, BI Analyst at mortgage companies or banks, Structured Products Analyst. The FRED API pipeline and dbt star schema pattern applies to any role requiring financial time-series analytics.
